### **Answer:**

For security and AMT setup requirements, a boot device must be installed for the system to allow AMT provisioning.

If you would like to adjust AMT Configuration properly, please [connect a boot device](#) before powering on system then [press DEL/F2](#) to enter BIOS environment for further setting. Otherwise, the AMT option will remain restricted from modification.

Without connect boot device then auto boot into BIOS:

Connect boot device then press DEL/F2 to boot into BIOS then AMT Configuration settings would be available:
